WATER SOLUTIONS

WEEP HOLE COVERS

Description and Application of a Weep Hole and Weep Hole Cover:

Weep holes are small gaps between the bricks in external walls. **Weep Hole Covers** are plastic rectangular discs which are bonded over the weep hole, with the ridge sloping downward and outward from the masonry, they can also be painted.

Dual purpose of weep holes:

Ventilation of the internal wall cavity which prevents potential mildew, dry rot and damp. Drainage of water that enters the cavity due to capillary action, condensation, or accidental flooding. In South Africa we have a climate that does result in heavy rains and flooding during season, it is not unusual to see water flowing from the weep holes on the prevailing side of the well-constructed houses after heavy rains and flooding.

Challenges with Weep Holes:

Weep holes also provide access for rodents, bees, wasps, snakes, cockroaches and other pests who find refuge in the cavities.

An unpleasant find !

*Minimum quantity – 200 units. Ex. Cape Town. Collection or delivery can be arranged.

Advanced Industrial Supplies

is the expert in the provision of wholesale industrial supplies.

We have clients ranging from the mining, industrial, agricultural, civil engineering and marine industries. Our core mission is to ensure we remain competitive.

We strive for high quality and an innovative unique range of products, to ensure all our clients specific tailored needs are met and exceeded. We assure you of our best and our drive for good value for money coupled with great customer service. We pride ourselves in building a lasting relationship with our partners.
